ELSEVIER

Knowledge-Based Systems 11 (1998) 485–488

Knowledge-Based SYSTEMS

Subject Index of Volume 11

Active index system
A light-weight Web-at-a-Glance system for intelligent information retrieval 115
Agents
Integrating user interface agents with conventional applications 15
Algorithms
Concept dispersion, feature interaction and their effect on particular sources of bias in machine learning 275
Automated software integration
CyberDesk: a framework for providing self-integrating context-aware services 3
Automatic layout
Adaptive Forms: an interaction technique for entering structured data 37
AutoSteve system
Hierarchical functional reasoning 301

BSCW
A rule-based process model for cooperative software projects. Tailoring and testing a software process to be used on the Web 105

Case-based reasoning
An optimized and enhanced cognitive memory model for mechanical design problems 197
An incremental retrieval mechanism for case-based electronic fault diagnosis 239
The omnipresence of case-based reasoning in science and application 261
A hierarchical case representation using context guided retrieval 285
Case-based content navigation 345
Case-representation
A hierarchical case representation using context guided retrieval 285
Case retrieval
An incremental retrieval mechanism for case-based electronic fault diagnosis 239
Change of constraint
Enhancing creativity through reorganising mental space concealed in a research notes stack 469
Collective creativity
Evolving spatial representations to support innovation and the communication of strategic knowledge 417
CommonKADS
Designing knowledge based systems: the CommonKADS design model 311
Compositionality
Strategic knowledge in design: a compositional approach 405
Computational critiquing
From critiquing to representational talkback: Computer support for revealing features in design 457
Computer supported cooperative work
A rule-based process model for cooperative software projects. Tailoring and testing a software process to be used on the Web 105
Computer vision
Integration of neural networks and expert systems for microscopic wear particle analysis 213
Concept formation
Concept formation in design 429
Concept formation from design cases. Why reusing experience and why not 437
Concept learning
Concept dispersion, feature interaction and their effect on particular sources of bias in machine learning 275
Conceptual model
Conceptual modelling: an essential pillar for quality software development 87
Configuration
The tender support system 363
Conflict
Conflict group decision training: model and system 191
Constraint-satisfaction
Inventory management using constraint satisfaction and knowledge refinement techniques 293
Context-aware computing
CyberDesk: a framework for providing self-integrating context-aware services 3
Context guided retrieval
A hierarchical case representation using context guided retrieval 285
Continue decision
Conflict group decision training: model and system 191
Creativity support system
Enhancing creativity through reorganising mental space concealed in a research notes stack 469

Database machine
Extending the superimposed codeword indexing scheme to handle incomplete information 179
Data entry
Adaptive Forms: an interaction technique for entering structured data 37
Data generation
Knowledge-based data generation 167
Data mining
Rough set extension of Tcl for data mining 249
Predicting paper making defects on-line using data mining 331

PII: S0950-7051(98)00089-6

Decision analysis
Embedding critics in decision-making environments to reduce human errors 229
Decision-making
Embedding critics in decision-making environments to reduce human errors 229
Decision-support
AICAMS: artificial intelligence crime analysis and management system 355
Decision-theoretic expert systems
A decision-theoretic network approach to treatment management and prognosis 321
Design
Representations of strategic knowledge in design 379
Design critics
Software architecture critics in the Argo design environment 47
Design support
Concept formation from design cases. Why reusing experience and why not 437
Design support for reflection
From critiquing to representational talkback: Computer support for revealing features in design 457
Domain-oriented design environments
Software architecture critics in the Argo design environment 47
Dynamic mediation
CyberDesk: a framework for providing self-integrating context-aware services 3

Elaboration
An optimized and enhanced cognitive memory model for mechanical design problems 197
Electronic fault diagnosis
An incremental retrieval mechanism for case-based electronic fault diagnosis 239
EMOP memory model
An optimized and enhanced cognitive memory model for mechanical design problems 197
Empirical studies
Issues for integrating knowledge in new product development: reflections from an empirical study 391
Engineering design
Issues for integrating knowledge in new product development: reflections from an empirical study 391
Enhancements
An optimized and enhanced cognitive memory model for mechanical design problems 197
Evaluation
Experimental evaluation of intelligent assistance for navigation 61
Evolutionary systems
Concept formation in design 429
Expert critiquing systems
Embedding critics in decision-making environments to reduce human errors 229
Expert system
Integration of neural networks and expert systems for microscopic wear particle analysis 213

Functional label
Hierarchical functional reasoning 301

Gear
An optimized and enhanced cognitive memory model for mechanical design problems 197
Group decision support system
Conflict group decision training: model and system 191

Human cognitive needs
Software architecture critics in the Argo design environment 47
Human–computer interaction
Adaptive Forms: an interaction technique for entering structured data 37
Human errors and biases
Embedding critics in decision-making environments to reduce human errors 229
Hypermedia
WebPersona: a lifelike presentation agent for the World-Wide Web 25
Hypothesis generation
Concept dispersion, feature interaction and their effect on particular sources of bias in machine learning 275

Image analysis
Integration of neural networks and expert systems for microscopic wear particle analysis 213
Incomplete information
Extending the superimposed codeword indexing scheme to handle incomplete information 179
Indexing
Extending the superimposed codeword indexing scheme to handle incomplete information 179
Information retrieval
A light-weight Web-at-a-Glance system for intelligent information retrieval 115
Case-based content navigation 345
Intelligent assistance
Experimental evaluation of intelligent assistance for navigation 61
Interactive systems design
Representations of strategic knowledge in design 379
Inventory management
Inventory management using constraint satisfaction and knowledge refinement techniques 293
Investigation
AICAMS: artificial intelligence crime analysis and management system 355

KBS evaluation
Common framework for the evaluation process of KBS and conventional software 145
Knowledge
Issues for integrating knowledge in new product development: reflections from an empirical study 391
Knowledge acquisition
Strategic knowledge acquisition: a case study of learning through prototyping 399
Knowledge-base construction
Rough set extension of Tcl for data mining 249
Knowledge-based analysis
Knowledge-based data generation 167
Knowledge based system design
Designing knowledge based systems: the CommonKADS design model 311
Knowledge-based systems
Expert Provisioner: a range management aid 339
Knowledge-base refinement
Inventory management using constraint satisfaction and knowledge refinement techniques 293
Knowledge engineering
Designing knowledge based systems: the CommonKADS design model 311

A decision-theoretic network approach to treatment management and prognosis 321
Expert Provisioner: a range management aid 339
Knowledge maintenance
The tender support system 363

Lazy learning
The omnipresence of case-based reasoning in science and application 261
Logistics
Expert Provisioner: a range management aid 339
Loosely-wired brain
Concept formation in design 429

Machine learning
Integrating user interface agents with conventional applications 15
The omnipresence of case-based reasoning in science and application 261
Maps
Evolving spatial representations to support innovation and the communication of strategic knowledge 417
Mechanical design
An optimized and enhanced cognitive memory model for mechanical design problems 197
Meta-knowledge
Strategic knowledge in design: a compositional approach 405
Modeling
Supporting the acquisition and modeling of requirements in software design 449
Modeling concepts
Concept formation in design 429
Models
Conceptual modelling: an essential pillar for quality software development 87

Naturalness of media
Enhancing creativity through reorganising mental space concealed in a research notes stack 469
Navigation
Experimental evaluation of intelligent assistance for navigation 61
Navigation space
WebPersona: a lifelike presentation agent for the World-Wide Web 25
Neural networks
Integration of neural networks and expert systems for microscopic wear particle analysis 213
Concept formation from design cases. Why reusing experience and why not 437

Optimization
An optimized and enhanced cognitive memory model for mechanical design problems 197

Paper making defects
Predicting paper making defects on-line using data mining 331
Parsing
Adaptive Forms: an interaction technique for entering structured data 37
Pinch roller
An optimized and enhanced cognitive memory model for mechanical design problems 197
Police
AICAMS: artificial intelligence crime analysis and management system 355
Predicting on-line
Predicting paper making defects on-line using data mining 331
Presentation agent
WebPersona: a lifelike presentation agent for the World-Wide Web 25
Probabilistic networks
A decision-theoretic network approach to treatment management and prognosis 321
Problem solving
Conceptual modelling: an essential pillar for quality software development 87
Problem solving framework
Knowledge-based data generation 167
ProcePT
A rule-based process model for cooperative software projects. Tailoring and testing a software process to be used on the Web 105
Process improvement
Requirements for the knowledge-based support of software engineering measurement plans 125
Product strategy
Evolving spatial representations to support innovation and the communication of strategic knowledge 417
Programming by demonstration
Integrating user interface agents with conventional applications 15
Programming by example
Integrating user interface agents with conventional applications 15
Prolog
Extending the superimposed codeword indexing scheme to handle incomplete information 179
Prototyping
Strategic knowledge acquisition: a case study of learning through prototyping 399

Qualitative reasoning
Hierarchical functional reasoning 301
Qualitative representations
Concept formation in design 429

Reasoning
Conflict group decision training: model and system 191
Representational talkback
From critiquing to representational talkback: Computer support for revealing features in design 457
Representations
Representations of strategic knowledge in design 379
Representing strategic knowledge
Strategic knowledge in design: a compositional approach 405
Reuse
Requirements for the knowledge-based support of software engineering measurement plans 125
Rough sets theory
Rough set extension of Tcl for data mining 249
RSLTcl
Rough set extension of Tcl for data mining 249
Rule base
Conflict group decision training: model and system 191

Sales support system
The tender support system 363
Scripting languages
Integrating user interface agents with conventional applications 15
Software architecture
Software architecture critics in the Argo design environment 47
Software evaluation
Common framework for the evaluation process of KBS and conventional software 145
Software measurement
Requirements for the knowledge-based support of software engineering measurement plans 125
Software process model
A rule-based process model for cooperative software projects. Tailoring and testing a software process to be used on the Web 105
Software requirements acquisition
Supporting the acquisition and modeling of requirements in software design 449
Strategic knowledge
Representations of strategic knowledge in design 379
Superimposed codeword
Extending the superimposed codeword indexing scheme to handle incomplete information 179
Supporting idea formation
Supporting the acquisition and modeling of requirements in software design 449

Tcl
Rough set extension of Tcl for data mining 249
Testing
Common framework for the evaluation process of KBS and conventional software 145
Traversal
An optimized and enhanced cognitive memory model for mechanical design problems 197
Treatment management and prognosis
A decision-theoretic network approach to treatment management and prognosis 321

Ubiquitous computing
CyberDesk: a framework for providing self-integrating context-aware services 3
User interface
Integrating user interface agents with conventional applications 15
User interface software
Adaptive Forms: an interaction technique for entering structured data 37

V-Model
A rule-based process model for cooperative software projects. Tailoring and testing a software process to be used on the Web 105
Validation
Common framework for the evaluation process of KBS and conventional software 145
Verification
Common framework for the evaluation process of KBS and conventional software 145

Web-at-a-Glance
A light-weight Web-at-a-Glance system for intelligent information retrieval 115
